

# EMPOWER PARENTS TO TAKE THEIR NEXT BEST NEXT STEP

*"I added this evidence-based resource to my post-diagnosis service plan to give newly diagnosed families immediate practical action steps forward"*  
 – Dr. J. Flanagan, MD, FRCPC, Pediatrician, ASD Specialist

## Why ThriveGuide?

Waitlists, affordability, decision fatigue and information overwhelm are all barriers that families face when trying to plan how best to help their child after an autism diagnosis.

As a professional in the field, parents seek your advice on what to do in addition to your services and you understand the benefits of parent engagement. Outcomes from your services can be maximized when parents participate.

ThriveGuide offers an innovative solution to engage your clients with multi-faceted, evidence-based and individualized foundational learning goals that are complementary to your practice.

ThriveGuide is designed to accelerate program outcomes. Let's change lives together!

## The ThriveGuide Platform: Evidence-Based Recommendations

First, our comprehensive and reflexive intake questionnaire, including several standardized psychometric scales, "listens" deeply to parents about their child's strengths and challenges.

Next, our proprietary algorithm generates 12 personalized, priority-ordered, and research-based recommendations.

Domains covered include physical health, social skills, language skills, independence, and repetitious and restrictive behaviours.

Each recommendation is accompanied by published peer-reviewed research articles that support the rationale and logic for each recommendation.
